11. Examine the role of venture capitalists and angel investors in fostering the growth and scalability of start-ups in India.

SECTION - C

12. **Compulsory (Case Study) :**

(1×15=15)

Rohan Mehta, an MBA graduate from Bengaluru, was deeply concerned about India's mounting urban waste problem. He identified the massive potential in India's recycling industry-worth over Rs.15,000 crore and founded *ReCircle Innovations*, a start-up dedicated to converting plastic and industrial waste into eco-friendly construction materials.

ReCircle's early prototype gained attention for its durability, low carbon footprint, and cost-effectiveness compared to conventional materials. Initially, ReCircle established partnerships with municipal bodies to collect segregated plastic waste. However, the company encountered several challenges -Supply chain inconsistency, Scaling difficulties, Investor scepticism and Market penetration barriers.

To sustain operations Rohan considered pivoting to a B2B model, focusing on bulk recycling partnerships with large construction companies. Rohan also contemplated introducing a circular economy platform, connecting waste generators directly with recyclers through a digital marketplace.

- a) Identify and evaluate the entrepreneurial competencies demonstrated by Rohan in conceptualizing and managing the startup.
 - b) Analyze the challenges faced by ReCircle Innovations during its growth and scaling phase.
 - c) Design an innovative business model or strategic plan that can help ReCircle Innovations sustain its operations and achieve long-term growth in the green construction sector.
-
