I Semester B.Com./B.B.A.
Degree Examination, December/January-2025/26

ENGLISH
Generic English (Envision - I)
(NEP Scheme)

Time : 2½ Hours**Maximum Marks :60****Instructions to Candidates:**

- 1) Read all the questions carefully and answer.
- 2) Write the question numbers correctly.

SECTION-A
(Work Book)

(40)

I. Read the following passage and answer the questions set on it : (5×1=5)

The human mind is one of the most remarkable and complex creations in nature. It is not merely the brain, but a dynamic system of thoughts, emotions, memories, and perceptions that shape how we understand the world. Scientists describe the mind as an intricate interplay between biological processes and conscious experience. While neurons carry electrical signals across networks, it is the mind that interprets these signals, giving rise to ideas, imagination, language, and identity.

One of the most fascinating abilities of the human mind is its capacity for abstract thinking. Humans can plan far into the future, reflect on the past, and conceive possibilities that do not yet exist. This ability drives creativity, innovation, and problem-solving. At the same time, the mind is influenced by emotions that can shape decisions as powerfully as logic does. Feelings such as fear, joy, anger, or empathy guide behaviour and often determine how individuals respond to challenges.

Memory forms another essential aspect of the mind. It allows people to store experiences and retrieve them when needed, shaping personality and learning. Yet memory is not always accurate; it can be altered by emotions, time, and personal interpretation. This makes the human mind both powerful and fragile. Similarly, attention—the ability to focus—plays a key role in how we process information. In a world filled with distractions, sustaining concentration has become increasingly difficult, especially for young people.

Despite centuries of research, much about the mind remains unexplored. Modern neuro science, psychology, and cognitive science continue to uncover insights into mental processes, revealing how habits are formed, how stress affects thinking, and how mindfulness can enhance mental well-being. The human mind, with its depth, mystery, and potential, remains a powerful force that shapes both individual lives and the progress of society.
