1. The importance of time management.
2. Social media : pros and cons.

V. Read the following passage and answer the following questions : (5×1=5)

The telephone is one of the most remarkable inventions in human history, changing the way people communicate forever. Before it existed, messages were usually sent through letters or telegraphs, which could take hours or even days to reach the receiver. The idea that two people could speak to each other instantly – even from faraway places – seemed impossible. But Alexander Graham Bell, a Scottish-born inventor, believed it could be done.

Bell grew up in a family deeply interested in sound and speech. His father worked on teaching methods for people with hearing difficulties, and Bell himself was inspired by his mother, who was hearing-impaired. This personal connection made him curious about how sound travels. As he grew older, he began experimenting with machines that could carry sound over distances.

In 1876, after many attempts and failures, Bell finally created the first working telephone. The breakthrough happened when he discovered how to change sound waves into electrical signals and then turn them back into sound. The very first words spoken through the telephone were Bell calling to his assistant : “Mr. Watson, come here. I want to see you.” This simple sentence marked the beginning of a new era in communication.

The invention quickly gained attention. Soon, telephone wires were installed in cities, businesses, and homes. People were amazed by how easily they could reach others. Over time, the telephone evolved into the mobile phones and smartphones we use today. Alexander Graham Bell’s invention not only connected people but also laid the foundation for many modern technologies. His curiosity, dedication, and willingness to experiment changed the world in ways he could never have imagined.

1. How did people communicate over long distances before the telephone was invented?
2. What inspired Alexander Graham Bell to study sound and speech?
3. Name the major discovery that allowed Bell to create the first working telephone.
4. The very first words spoken through the telephone were Bell calling to his assistant: “Mr. Watson, come here. I want to see you.” (True/False)
5. Why is Alexander Graham Bell’s invention still important today?

**VI. Rearrange the following sentences into a coherent paragraph. (5×1=5)**

1. In addition, participating in clubs, sports, and cultural activities fosters leadership, teamwork, and creativity.
2. College life is a unique phase that shapes a student's personality and future.
